

## Urgent Investor Alert

***One of the world's most prominent investors warns:  
Prepare yourself for meager 5% returns from stocks...  
and an extended period of slow growth.***

# Welcome to the "New Normal"

**This news will devastate thousands of investors...**

**But in this report, I'll show you how you can escape this new reality –  
and tap into a steady stream of income – potentially doubling  
your income overnight!**

## Here's how to get started...

Dear Investor,

They call him the "Bond King."

Bill Gross is one of the world's largest and most successful mutual fund managers – and the nation's most prominent bond investor.

Just recently – in a national publication – Bill Gross spelled out his vision for the future.

### **And it's not pretty.**

None of what Bill Gross has predicted should come as a shock – but rather...it's a troubling confirmation of what many of us have suspected for some time.

As an individual investor, you must prepare yourself for:

- \* **Slow growth**
- \* **Lower returns** on your investments
- \* And an overall **more difficult time** making money.

Welcome to...**the New Normal.**

I don't know about you – but I'm not eager to accept this new reality lying down.

***"Instead of 10% returns for stocks,  
look for five or so. And instead of the  
past 20 years' returns on bonds,***

Quite frankly...the prospect of 5% returns for stocks – or 4% from bonds – isn't something I'm interested in.

*which are actually better than stocks – close to double digits – it's 4% going forward. So that's what the new normal is."*

In fact – I flat-out refuse to accept this.

– Bill Gross, *Money Magazine*, July 2010

Because I don't have to – and neither do you.

Here's what I mean...

I've discovered a unique type of income investment that allows individual investors – just like you and I – to bypass the "New Normal" and continue making money in the market.

In fact, this unique investment – something I refer to as "**Recession Insurance Vehicles (R.I.V.s)**" – actually provide you with a steady stream of income...and can help you potentially double your income overnight.

*But that's just the beginning...*

\* **R.I.V.s** have outperformed bonds with **250% gains to bonds' 50% losses** since 1977.

\* **R.I.V.s are up 40%** over the past 10 years...while the Dow has lost 26% over that same time.

\* **R.I.V.s** are a favorite investment vehicle of some of the **world's greatest investors**, including Warren Buffett and John Paulson. Buffett alone bought 8 million shares in just a matter of months!

\* **R.I.V.s have a proven history of performance** – they've been paying investors consistently since 1956...and they'll continue to do so for as long as capitalism is an economic force.

I've spent the last two decades testing – and proving – the overwhelming success individual investors can enjoy by investing in R.I.V.s.

In fact – I've helped one group of individual investors just like you earn an **average 15.47% return** every year...and that's via my safest available portfolio.

Yet in spite of this success...there's a good chance you may not have taken advantage of this exceptionally powerful investment vehicle.

I'm writing today to help you change all of that...with just a few easy steps.

Listen...

I understand that over the last two years, it's been difficult to build wealth in such a volatile market.

No question about it...a lot of very smart – and very experienced – investors have been burned badly.

**And the realities that experts like Bill Gross are now predicting are downright depressing. For most investors, this "new normal" of meager 4-5% returns will have a devastating impact.**

But you must know...

*You don't need to let your money simply rot away in low-yield Treasuries and money-market funds that don't even beat the rate of inflation!*

## **Introducing...Recession Insurance Vehicles: The Most Powerful Income Investment Ever Created**

Welcome to the world of high income and higher peace of mind.

Give me five minutes and I'll show you why now is the best time in more than a decade to jump into this income stream that hasn't run dry in its 100-plus-year history, and won't for as long as America keeps the lights on.

My name is Roger Conrad...and I'm the editor of an advisory service that was specifically designed to take maximum advantage of the power of R.I.V.s.

Simply put...R.I.V.s are the surest, steadiest, highest-paying investment available to individual investors.

So what exactly are "Recession Insurance Vehicles"?

You may know them by another name: **Essential services**.

Amazingly, even though more than 100 years of market history prove they outperform everything else for income, safety and growth, most investors overlook the essential services industries.

Services like electricity, water and communications. There is nothing more stable, secure, safe and growing.

**Meet Roger Conrad**

*"Almost always right."*

He answers his own phone. Replies to all his emails. Takes time with investors, whether or not they're subscribers to *Utility Forecaster*, and makes sure their questions are fully answered.

In other words, he's a guy you'd want as a friend, and nothing like what you'd picture of the man described by the nation's foremost dividend investing expert as "almost always right."

Lowell Miller, manager of a billion-dollar fund and author of one of the best investing books ever written, *The Single Best Investment*, is a tough critic, saying, "I don't think much of newsletters in general; many of their writers don't seem to be qualified to hold a regular job, much less give investment advice!"

"But *Utility Forecaster* is written by a hard-working, independent thinker who

The world can do without another Starbucks or a faster computer. It can even do without Google and eBay. But even in the worst of times it can't do without lights, heat or clean drinking water.

That single irrefutable and immutable fact is central to every investment decision I've made since 1989, when I started my investment advisory, *Utility Forecaster*.

Since then essential services stocks – otherwise known as R.I.V.s – have given my subscribers unwavering wealth.

For over 21 years, subscribers have been living well with average annual returns of more than 15.47%.

That's in the safe portfolio. But even my ultra-conservative high-income portfolio has averaged 10.9% over its 11 years.

And that's not counting the power of growing and reinvested dividends.

## Double your income overnight.

Doubling your income without increasing your risk isn't as hard as you've been led to believe.

Instead of \$25,000 a year you could be earning \$50,000 — on the same size portfolio!

In fact, you could start earning double your current income as soon as tomorrow in utility stocks so stable that they've paid and raised dividends nearly every year for a quarter of a century or more.

- One stock in my *Utility Forecaster* portfolio yields 7.3% today, and has raised dividends 62% since 2006. Since I first recommended the stock in 2004 it has given subscribers **total returns of 49%**
- Another "R.I.V." yields 8.5% and pays distributions like clockwork 12 times a year. Since recommending it to subscribers 60 months ago, it has shot up **103%**
- A third "R.I.V." yields 6.2%. Yes, it's a bit lower than the others, but within my conservative, income-generating portfolios there's room for some growth, and this

makes my job easier."

Which is exactly what Roger sets out to do – make every investor's job easier. And not just your job, but your life, too.

After all, think how much easier your life would be with returns of 15.47% a year, year after year.

Subscriber Gisela Connelly calls Roger her "guiding light."

Chuck Beeler says, "I have always appreciated your wisdom. I have taken your advice over seven years now and it did help me tremendously taking care of my mom... My mom received the best of care and I couldn't have done it without your help... I just wanted to let you know how much you helped my mom."

Barbara Mayers Keller says, "You have so much good information and knowledge and it is incredible that you can find the time to answer so many people's questions! You are amazing and I am so very grateful."

And Charles Ego says, "You are my friend for life."

Yet just because Roger is one of the nicest, most thoughtful guys you'll ever meet doesn't mean he can't be tough when he needs to. Subscribe to *Utility Forecaster* by [clicking here](#).

one delivers. Besides raising dividends over 24 consecutive quarters, it has rewarded subscribers with **total returns of 373%** – compared to the S&P's 27% loss for the same period.

You may notice, too, that each of those stocks paid and raised dividends right through the market crash of 2000, the energy slump of 2002 and the 2007-2009 recession. Just like an endless stream of income should.

## **Buy stocks? Now? *Are you kidding?***

Investors ask me all the time if it's prudent to buy stocks in this whipsaw economy. The answer is an absolute, unconditional, pure and simple yes! And not just for their potential to give you profits five years from now — it's time right now to double your income!

Just by elimination, where else is your money safe, growing and paying you income? Not in Treasury bonds. Their yields are at their lowest in history. Banks and hedge funds and even some countries are collapsing. Corporate bonds are riddled with default potential, CDs and money market funds barely keep up with inflation and most stock sectors are in the tank.

But as Bill Gross has predicted – you can't simply invest in "ordinary" stocks right now. Not unless you're comfortable with assuming plenty of risk...in the hopes of a pitiful 5% return.

No thanks.

That's why it's such a great thing utilities like power generation, water distribution and communications are performing!

In fact, over the past three months utilities is the only industry that racked up positive gains for each of its component sectors!

No wonder my subscribers aren't the only ones loading up on select utilities...

## **Warren Buffett and John Paulson are buying. *You should, too.***

When the world's best investors buy what you're buying it's always a good sign. Today utilities are cheap enough for Buffett and strong enough for Paulson to pick up huge interests, and that's just what they're doing left and right.

Over the last two years Buffett's been loading up on power generation, natural gas pipelines and power distribution companies. As the economy worsened over the second half of 2008, he packed in utilities like a squirrel packs in acorns before a long winter. Buffett bought three million shares of one "ute" and then went back for five million shares

more just a few months later.

And he's not the only one. John Paulson is the brilliant investor who made 587% in 2007 betting against subprimes. Then in 2008 he made 37.6% by focusing on financial shorts and recession-proof industries like – you guessed it – utilities.

He went on to buy an 11.7% stake in one of the world's biggest utilities and 14.6% ownership in another – in addition to his holdings in a number of other choice utilities.

Paulson isn't known as a buy-and-hold guy like Buffett, either. He expects a quick and very significant return on his money. Fortunately, R.I.V.s are the best place to get both.

*"Utility Forecaster* has been the keystone in my investment program, enabling me to comfortably retire early."  
– R. Bennet of El Cajon, California

I have a few new stock ideas I have a hunch they'd both be interested in – way undervalued, with above-average yield, and solid histories of earnings and dividend growth. Even better, they're in a sector that is pivotal to global growth and priced to soar, launching you out of losses and all the way to spectacular returns.

[Buy these stocks today](#) and you could already be earning double your current income by tomorrow and set yourself up for some of the biggest capital gains you've ever had.

## **Where to start: The best utilities to buy today.**

If you're going to go for the safety and predictable income of my top recommended utility stocks, you might as well take advantage of major trends gaining strength today for capital gains, too.

Because not only will these essential services stocks keep your income steady during these dangerous economic times. And not only could they be the first to soar out of recessionary times, as they traditionally do. Layer those strengths on top of accelerating trends and your total returns could outstrip the wind!

Even while the economy struggles to get back on its feet, unstoppable trends are gaining force. You're standing at the threshold to the future, the intersection where the world's dwindling resources crash into its growing need for water, power and instantaneous global communications.

More than ever before, the companies that fail to introduce or adopt new technologies will wither and die. But companies that lead the way with solutions to our need for clean, plentiful, renewable, inexpensive technology and services will dominate.

Invest in those companies and you'll be tapping into a stream of income that will last for at least another generation.

It's still early in the game, but a few companies are already in the lead. Their technologies

and vision are far ahead, and others will have a hard time catching up.

With the same amount of money you have invested today put into the stocks you're about to discover, you could potentially *double* your current income.

### **Endless Income Stream #1**

#### **First you profited from the oil wars. Now there's something bigger...**

Either invest now or be sorry later, because water wars are heating up like the oil wars before them. And water industry stocks are about to do the same, giving you profits of 100% or more in the next two years.

Mark Twain predicted our global water crisis more than 100 years ago when he famously said, "Whiskey's for drinking, water's for fighting over." Scarce even then, it's in critically short supply now – and getting worse.

Plus the scarcer water becomes, the more valuable your investments will be.

One water stock in my *Utility Forecaster* portfolio has paid dividends for 59 straight years. The stock has split six times in 12 years, and has given subscribers an average of 34.86% every year for the 16 years it's been in the portfolio!

That's *on top* of dividend payouts that are some of the biggest and steadiest you'll ever find.

Now a crisis opportunity means even bigger profits for you.

More than 400 million cubic meters of groundwater are pulled from Arizona aquifers every year, twice what's being replaced by rainfall. That's just one microcosmic example of what's going on all over America...and the world.

## **"The biggest deal of my life."**

Warren Buffett is an early water investor. So is T. Boone Pickens, who says his "water deal has the potential to be the biggest deal of my life."

The United Nations warns that water wars could soon become armed major conflicts. By 2050 nearly half the world's population will live in areas that are chronically short of water.

Countless technologies, from the hare-brained to the heroic, are being tested and put in place to quell the looming crisis.

Turkey sends water to Israel and Cyprus in five-million-gallon floating balloons, and England is considering pipelines to bring water all the way from Scotland.

But the company that gets the technology right stands to become a global leader.

And I know who's got it right. Invest in this company and the income from *this stock alone* could fuel a healthy retirement....

With literally thousands of individual systems too small to meet safety standards, America's water industry is in dire need of consolidation. My latest pick is one aggressive aggregator, completing 60 acquisitions in the last two decades.

Operating in a state with 500 systems – most serving relatively affluent areas and 75 percent with less than 500 residents – the opportunity for acquisition-led growth is immense.

And the company continues to benefit from favorable legislation that funds \$13 million to \$15 million per year in pipeline replacement.

This ensures the sizeable capital budget – projected at \$25.8 million in 2010 – will flow through to earnings and, ultimately, dividends. The ute also has thriving businesses providing utility-related services and managing systems of municipalities for a fee.

Second-quarter results were again solid, with both revenue and net income rising 5 percent. The company also increased its dividend for the 41st consecutive year, with the 2.2 percent boost matching last year's increase.

This steady if unspectacular growth is set for years to come, and now's an exceptional time to buy into it.

Everything you need to know is in a new special report I just released exclusively for my *Utility Forecaster* subscribers. Get it today and you'll discover how to make a wise investment in this company. Plus you'll learn about the whole water industry and other water stocks both to watch and stay away from as the sector becomes a must-own for every investor.

The report is called **Liquid Gold Rush**, and it's yours FREE when you take a no-obligation trial subscription to *Utility Forecaster*, the newsletter that investors call "the one and only financial report" they trust.

"...one of the few PROFESSIONAL investment grade advisors in North America, and possibly well beyond these shores."

– John D. MacLachlan

You can get the report, and the whole *Utility Forecaster* portfolio of top recommendations, [right now.](#)

But first, there are two other industries that are at a critical point in history where old technologies are fading away and new technologies are creating new global leaders, and I want to make sure you have the opportunity to jump in for big gains.

One of those industries is **electric power**, and future leaders must be as good at generating clean power as they are at creating shareholder value....

## **Endless Income Stream #2 Powering China and your portfolio.**

The world's urgent need for more fuel and electricity is colliding head-on with the new mandate to preserve the environment. And only the companies that can balance both needs – and do it effectively, quickly and cost-efficiently – will thrive.

Which is exactly what this leading-edge company, founded in 1901, is doing.

They're one of the world's oldest, most reliable power producers/distributors. Their long-established power contracts fuel a steady stream of cash payouts to you from that ongoing business. Meanwhile they're reaching out to dominate more and more regions.

Right now they're building the *world's largest solar plant* in Australia, and they just inked a deal for two wind-generated power plants in India with combined output of 183.2 megawatts.

Plus they just opened a 1,200-megawatt coal-fired plant in China that was completed on schedule and built for half what it would cost in the West.

And they're replicating those efficiencies in bids across Asia and beyond with their proven expertise in both traditional and a wide variety of alternative energies – which are, as we know, less alternative and more mainstream every day.

Most important, their relations with China date back to 1985, when they built China's first nuclear power plant.

Now they've built and are operating China's premier nuclear power plant, which is also being used as China's nuclear training grounds to pump out a steady stream of engineers to man the plants.

China's building 30 nuclear plants over the next 12 years, and I expect some sizable contracts to go to this company.

### **Buy now, while this one's cheap.**

All those projects are good reasons why they've beaten the Dow in just about every time period over the past 10 years. Their stock is climbing steadily from its 2008 low, and is on track to keep growing for many years to come.

Yet even with that growth the **stock still trades at less than \$10 today**, and trading volume is so low that I'm amazed so few investors have found this hidden gem.

It's not often you find a stable income investment that also gets a hefty capital gains kick from China's growth. Not to mention one that mows right through downturns.

This is definitely one of the few there are. And it's definitely one that you'll want to put in your portfolio now, while it's cheap, and let it fuel your income and your wealth for years to come as the company's profits flow in from their expanding world-wide operations.

You'll discover this future multinational, along with a dozen more stocks that are branching out to control the globe's demanding utility needs, in another special report, **Powering China**. And it's *yours free* when you subscribe to my [Utility Forecaster](#).

Chances are you've never heard of most of the stocks in this report. Most don't do business in the U.S., and some are only now expanding out of their home regions.

*Utility Forecaster* has been called "the nation's leading advisory" on utilities, and I've been called "one of the top independent analysts of the essential services industry."

But *every one of them has potential to be a future global leader*, and they all trade on U.S. exchanges so you can easily buy and sell.

The same is true of the third must-own industry you need to know about. And this one is...

### **Endless Income Stream #3 A "game changer."**

Every now and then a company comes along that not only changes the rules of the game, it changes the game itself. Think Microsoft, eBay, Wal-Mart.

The world of **communications** is about to experience another game change, and it's going to hit you right at home.

Your phone service carrier is entering the entertainment business by offering live TV programming and downloading of just about anything you want, right over your computer, as part of your phone and broadband service package.

Meanwhile, as part of your wireless package you'll get the same media choices over your cell phone. And if you think it's far-fetched that anyone would want movies or TV on their cell phone, you don't have a teenager!

Internet protocol television (IPTV) already has 28 million subscribers, and is expected to jump 264% by 2014. Europe's IPTV subscribers soared 250% in 2007 alone, and doubled worldwide in 2008 even as economies faltered. In fact, broadband growth has actually accelerated thus far in 2009 and 2010.

A battle is brewing between the world's biggest carriers to see who will own the space. Two will win.

Both are undervalued today, but one is an especially good buy, and I expect its stock to

shoot up **150% in the next five years** as it leaps ahead in subscriber numbers.

You don't get chances like this very often. One of the world's most stable companies, with plenty of free cash flow to pay out four times a year in hefty checks to shareholders.

The stock is off its high, giving you a perfect buying opportunity. Get in now and enjoy the income, but hold on tight for the growth ahead!

You'll discover the name of this stock in my special report, ***Broadband Billions***.

The special report, along with ***Liquid Gold Rush*** and ***Powering China***, is [FREE with your subscription to \*Utility Forecaster\*](#).

## **Discover why *Utility Forecaster* has one of the highest renewal rates in the business.**

You're invited to join the most satisfied investors in the country...probably in the whole world.

And why *wouldn't* they be satisfied — **I defy any other newsletter to claim a record of 7% average yields, and 15.47% average total returns for 21 profitable years.**

The investments you discover in *Utility Forecaster* are legacy investments. You'll earn income from these "R.I.V.s" today while they work behind the scenes to build your wealth with capital gains, until you've created a fortune to spend or to pass on to your children.

I still have subscribers who have been with me since the first issue in 1989. Others have passed the *Utility Forecaster* legacy to their children, like Professor Lief Carter's father.

Professor Carter says, "My father told me, 'There is only one investment newsletter that I find useful and I urge you to continue reading, and that's *Utility Forecaster*.' I have been reading — and profiting from — *Utility Forecaster* ever since."

Others, like Richard Bennet of El Cajon, California, say, "*Utility Forecaster* has been the keystone in my investment program, enabling me to comfortably retire early."

And John D. MacLachlan says I am "one of the few PROFESSIONAL investment grade advisors in North America, and possibly well beyond these shores."

*Utility Forecaster* has been called "the nation's leading advisory" on utilities, and I've been called "one of the top independent analysts of the essential services industry."

*But my best reward is the success of subscribers.*

And so whether you're retired now or saving for retirement, whether you want extra income to pay for a vacation or to build a legacy for your children, *Utility Forecaster* is

your best way to achieve your goals.

## Everything you need to create an endless stream of income.

[Join us today](#) and you'll always be ensured...

- **The best combination of safety and high yield.** Nothing outperforms utility stocks when it comes to steady income. And within that category I give you the best of the best – utility stocks that have averaged 7% yield and 15.47% returns for 21 straight years.
- **The best combination of income and growth.** You get four model portfolios so you can choose stocks according to your comfort level, from conservative income to aggressive (higher-yield) income, and from conservative growth to aggressive (but never high-risk) growth utility stocks.

- **Detailed ratings on nearly every utility in the U.S.** If you ever find a new utility and want to know how it rates, just look it up on my list of "How They Rate." If you don't find it among those 200+ stocks, let me know and I'll see if it's a worthy addition to the recommendations. I always answer your emails or letters.
- **Detailed ratings on the best utilities from around the world.** In our global community you can't afford to ignore investments from outside the U.S., so you'll know how the best non-U.S. utilities rate, too.
- **12 investment-packed monthly issues.** First and foremost, your 12-page monthly newsletter keeps you on top of a high-producing portfolio. You'll always know whether it's time to buy, hold or sell. What's more, each issue tells you what's happening in the industry and how it affects your investments, and what's happening with your portfolio companies, dividend watch list and more.
- **Can't-miss weekly hotline.** Many subscribers like their weekly hotline emails just as much as their monthly edition. They're timely and keep you right on top of important news.
- **Subscribers-only website.** You have instant online access to your current newsletter and hotline, archived newsletters and more, including industry and economic analysis, what's going on in the market now and a constantly updated database that includes 200+ Recession Insurance Vehicles and how they rate.

- **Three restricted-access money-making reports.** The three special reports you saw above, *Liquid Gold Rush*, *Powering China* and *Broadband Billions*, aren't available anywhere else. They were written exclusively to give subscribers the kind of expert investment analysis that brokerage and research firms would pay \$5,000-\$10,000 to commission. (Yes, I provide my analysis to brokerage and research firms, too – they don't have this kind of capability in-house.) But they're [yours FREE when you subscribe.](#)

All the above benefits, including all three special reports, are yours for a surprisingly low price.

## **"Test drive" *Utility Forecaster* for 12 months – for only \$99!**

I would be honored to have you as a subscriber. And I'm confident that I can help you achieve an endless stream of income, double what you're getting today.

You can have everything you need to achieve that goal, which includes everything on the lengthy list above, for just \$99.

What's more, if you ever decide you don't want to subscribe any longer, I will give you a full refund.

Even if you decide in the 11th month of your 12-month subscription, just let me know and *I'll pay you \$99.*

There's simply no way to lose – you either achieve the highest, safest income you've ever had, or you get your \$99 back.

## **Or save even more – 24 months for only \$179!**

A money-wise choice would be to try *Utility Forecaster* for 24 months and save an extra 10%.

You'll get the same guarantee: Even if you decide in the 23rd month of your 24-month subscription that *Utility Forecaster* isn't for you, you'll get your \$179 refunded.

Plus, making a 24-month subscription even a more money-wise decision, you can have three additional money-making special reports...

**Fuels of the Future.** Soaring oil and natural gas prices make "alternative" energy anything but alternative. This report separates the hope from the hype, and tells you which companies will dominate the energy market sooner than you think.

**5 Bounceback Stocks.** Crushed in the wake of Three Mile Island 25 years ago, General Public Utilities (GPU) soared twentyfold in the next ten years. In the late '90s energy trading crushed more than just Enron, but today the five companies you'll discover in this report could repeat GPU's rise from ashes.

**Old School Stars: 5 Unstoppable Back-to-Basics Utility Stocks.** These super-safe high yielders are still growing, and between dividends and capital gains the five stocks in this report could give you 100% in the next 3-5 years. But remember, that's based on today's super bargain prices, which means buying soon is imperative!

## **A guarantee with teeth: If you don't like *Utility Forecaster*, I'll pay you \$99!**

Twenty-one years of ever-wealthier subscribers tells me that you will thank the day you subscribed to *Utility Forecaster*.

But I understand that you might have reservations. And so I'll give you a guarantee that would bankrupt me if subscribers actually *didn't* profit.

If you ever decide you no longer want to subscribe to *Utility Forecaster*, even if it's in the 11th month of a 12-month subscription, just let me know, and I'll pay *you* \$99.

For 21 years *Utility Forecaster* has given subscribers average annual returns of 15.47% in my *safe* model portfolio. And even my ultra-safest-of-the-safe portfolio averages 10.9% over its 11-year history.

These are *real* returns made by real investors like you. And investors like Edwin Kaufman of Calabasas, California, who says that over the years *Utility Forecaster* "has been the one and only financial report that I trust."

Quite simply, Recession Insurance Vehicles are the most powerful income investment ever created. There is no other investment that can give you a steadier stream of income plus growth, either in the short run or the long run.

**Today you could change your life. You could double your income, enrich your retirement, create wealth for your children.**

And to get started, all you have to do is [click here](#).

I guarantee it will be one of the most profitable decisions you ever make.

Sincerely,

Roger Conrad  
Editor, *Utility Forecaster*

P.S. Remember – you're about to get bombarded with depressing news from the mainstream media...and it will be easy to accept the reality of 4-5% returns on your money. Don't fall victim to it – you can tap into a steady stream of continuous income and potentially double your income overnight with R.I.V.s!

P.S.S. To speed your decision I'll throw in another valuable special report, ***High Yield Without High Risk: 3 Stocks Every Income Investor Must Own***. The highest-yielding stocks usually end up giving the worst returns, but there are a few that you can count on. Three, to be exact. These stocks will give you super-high yield, but they won't burn you. [Subscribe in the next 10 days to get their names for FREE!](#)
