Boca Raton, FL 33432

SUPERSTOCK INVESTOR™

Profiting from Wall Street's Best Undervalued Companies Since 1978

UNNATURAL Profit Potential!

Over the next 12 months you could outperform the market by simply throwing a dart at a chart of natural gas companies, then blindly picking your winner...

Or you could do much better - with profits of up to 526% in less than one year - by investing in this \$20 stock that's currently trading for much less than that

THE BEST ENERGY INVESTMENT OF THE DECADE?

Dear Investor,

I'd like to tell you about a remarkable property worth untold millions, but before I do, I'm going to let you in on what I've been telling my subscribers for the last year...

Invest in Natural Gas!

Even if you don't like the company I'm going to tell you about... even if you don't like oil and gas plays... AND even if you don't think this report is worth the paper it's written on, I urge you...

Invest in Natural Gas!

I tell you this so that years from now when fortunes have been made and nest eggs secured you can't say you weren't told to get in at the bottom!

You see, the wheels are already in motion for a **historic bull market in the energy sector**. Turn on your television or pick up a newspaper and you can't help but hear about energy.

INSIDE: Learn the inside story... why one California based company will outperform the rest and make early investors a fortune!

SUPERSTOCK INVESTOR™

Profiting from Wall Street's Best Undervalued Companies Since 1978

Dear Investor:

First allow us to introduce ourselves.

We are a monthly newsletter that specializes in finding little-known companies with great profit potential. These "finds" are typically on the ground floor of an entirely new industry...riding some powerful social or technological trend...which have mostly been overlooked by the Wall Street analysts.

SuperStock Investor has been doing this for 26 years – since 1978 – and we've gained an impressive reputation for being able to spot stocks that sometimes jump as much as 50% or more within a week or two.

Over the years, our editors have appeared on *Wall Street Week*, *The Nightly Business Report* and *CNBC*. Our stock picks have been reported in virtually every major financial publication including *The Wall Street Journal*, *BusinessWeek*, *Fortune*, *Kiplinger's Personal Financial*, *Money Magazine*, along with *The New York Times* and others. Financial columnist Dan Dorfman has said that *SuperStock Investor* is "unquestionably one of the hottest – if not THE hottest – takeover picker."

Set Your Sights High... Aim For Triple-Digit Returns!

Why is *SuperStock Investor* so unique? Because it produces gains that will make you sleep better at night. (Unless sheer excitement tends to keep you awake!)

Continued on Page 12

Whether it's skyrocketing oil prices...large-scale blackouts of unprecedented proportion...or the average family's daily misery at the gas pump...our ever-increasing dependence on oil and gas has clearly become a "sexy" story for the mainstream media.

But they're all missing the point, as usual.

*"Demand for natural gas in North America hit an all time high and is expected to rise 50 percent by 2025."
Report on Energy - Sept 2004*

*Natural Gas Seems Headed the Way of Oil: More Demand, Less Supply, Higher Cost
New York Times -Aug 20, 2004*

*"With oil prices rolling toward all-time highs, the longer-term forecast for oil prices is much less certain."
MSNBC - September 2004*

THE REAL STORY: Today's Market Conditions Create an Enormous Opportunity

That's because the *real story* has nothing to do with how much Americans will pay at the pump next year. Let's face the facts: Americans are historically enormous energy hogs. One out of every four barrels of oil produced in the world is consumed in the U.S. Those facts are not going to change any time soon.

Another fact that isn't going to change is this: our energy supply is steadily dwindling. In fact, U.S. oil production is right now at its lowest levels since the early 1950s.

It's a simple equation, really: shrinking supply + booming demand. You don't have to be Einstein to work out the solution to this equation: *rising energy prices*.

And that's where the *real story* comes into play. Because rising energy prices create an

enormous opportunity for investors. In fact, the single smartest way to not only hedge against – but also take advantage of – rising energy prices is *to invest in producing energy stocks today*.

The opportunity I will describe to you in the pages of this report is a perfect way to take advantage of the red-hot energy market. I suggested earlier that this company – one you've likely never heard of – could be the best energy investment of the decade...and with good reason.

The "secret" to making a fortune in energy stocks

Let's face it...making money in today's market is not always easy. And it can be particularly tricky – although also very rewarding – for energy investors. In many cases, it's nearly impossible to find companies with high potential returns without taking on a great deal of risk.

The key – as I've *found* – is to minimize that risk by looking for companies that have actually found oil and gas...not those that are still *trying* to find oil and gas. And at the same time, the key to **maximizing return** is finding companies that are not yet known by the investment community.

To be sure, uncovering little-known companies that have actually made a discovery is extremely rare.

But when it happens... the results can be beyond your wildest dreams. Every once in a while, a company comes along – at just the right time, in just the right place and with just the right projects.

One such company is as close to the "all American success story" as I've ever seen. This little-known, publicly-traded company is called **FIDELIS ENERGY (OTC.BB: FDEI)**.

Continued on Page 5

For more information on Fidelis Energy (symbol: OTC BB: FDEI), visit www.fidelisenergy.com.

Are you ready to profit from the new bull market in oil and natural gas?

Crude oil was at \$10 a barrel in 1998, and today is selling for around \$50 a barrel – an increase of 400%.

At the risk of stating the obvious, let me do just that: the higher oil prices go, the greater the value of Fidelis Energy – and all other oil exploration companies with producing properties.

The major asset of Fidelis is proven barrels of oil in the ground at its various properties. At Comanche Point alone, that's over 5 billion barrels. The higher the price of a barrel, the more the asset (the oil below the surface of the field) is worth.

Are oil prices heading higher? You bet they are!

America is a great nation. But we are also energy hogs: one out of every four barrels of oil produced in the world is consumed right here in the good old U.S. of A. In 2004, the United States will consume 7.5 billion barrels of oil.

Natural gas prices tend to rise in synch with oil prices.

So in the supply and demand equation that controls the price of every product on Earth, from oil to opera tickets, the demand side of the equation for oil is enormous.

As for the supply, it's steadily dwindling: U.S. oil production is declining by 2% annually. Today U.S. oil production is at its lowest levels since the early 1950s. Over the

last 34 years, U.S. oil reserves have declined by 40%, from 50 billion to 20 billion barrels.

The U.S. is more dependent on oil imports than it was two decades ago. In 1982, we imported 28% of our oil from overseas. Now, imported oil accounts for 46.3% of the total oil consumed in the U.S. By 2020, the U.S. will produce only 21% of the oil it consumes, down from nearly 90% in 1950.

Who controls oil prices? The Organization of Petroleum Exporting Countries (OPEC), an oil cartel whose members are the major oil-producing nations in the Middle East – a geopolitically unstable region, especially in the wake of 9/11 and the War in Iraq.

It's easy to forget that the U.S. is not OPEC's only customer. OPEC sells to the whole world, a world thirsty for oil. By 2010, total global demand for oil may rise by an additional 20 or so million barrels per day (mbd), totaling 91 mbd.

Continued on Page 13

In less than one year, this small American energy company has achieved unbelievable success. With the use of modern geophysical technology – which I'll tell you more about in just a moment – the company discovered a

new natural gas reservoir that could lead to enormous profits for investors.

Just how enormous? Let's do some quick math:

The \$20 energy stock you can buy for a fraction of the price.

- ▶ Initial production rates from Fidelis Energy's largest discovery (which I'll describe in detail in just a moment) could exceed 5,000 mcf (million cubic feet) per day.
 - ▶ At current market prices for natural gas, this would generate approximately *\$12 million per year* for each well drilled at the North Franklin property.
- With the company's plan to situate 12 wells on the site, a 35% stake in the project
- ▶ and the company's 56.3 million shares outstanding, it is clear that Fidelis Energy (FDEI: OTC.BB) is greatly undervalued.
- The average P/E (price-to-earnings ratio) for oil and gas exploration companies is
- ▶ between 20 and 30. Again, at a P/E of 20, Fidelis Energy stock is **greatly undervalued** and should be selling at **\$16.42 per share** when the company reaches full capacity.

Today you can buy the stock at just a fraction of that price!

- At a P/E of 30 – again, a figure that is common in today's market – shares of Fidelis Energy would be **selling for over \$20**. And remember, *these earnings figures take into account only the North Franklin project...so the potential is actually much, much higher for this stock!*

Now that I've quickly shown you the numbers – and spelled out the enormous profit potential of Fidelis Energy – let's take a closer look at the inside story as to why Fidelis Energy is such an outstanding investment opportunity at this very minute...

Unbelievable Success...in Less Than One Year's Time!

In less than twelve months, this small, start-up energy company has achieved unbelievable success.

With the use of modern geophysical technology, Fidelis Energy's geologists and engineers were able to perform sophisticated seismic testing on an area just outside Sacramento, California.

Crew at North Franklin.

The veteran team at Fidelis Energy and its strategic working partners strongly believed the target

contained a natural gas deposit. Based on data, technology and expertise, the team punctured the zone with pin-point accuracy.

Fidelis Energy had made a discovery. They discovered a new natural gas reservoir at a property known as North Franklin.

But that's not all...

BREAKING NEWS: FIDELIS ENERGY TO DRILL DEEP GAS ZONE AT NORTH FRANKLIN!

“This zone could potentially be much larger than the above Winter’s Formation.”

Sacramento, CA -- Following the natural gas discovery in the Winters Formation at North Franklin, a detailed seismic review was implemented from the good quality 2D seismic covering the acreage under lease. With success penetrating the above zone, the Company is preparing a detailed drill program for this deeper zone.

“Both engineers and geologists strongly agree that this new ‘Deep’ anomaly has a signature almost identical to the above discovery... but much larger.”

The Deep Zone is much larger than the estimated 40.5 - 60 Bcf gas in the above Winter’s Formation. It covers a larger area under the property and would add significant potential revenue to the Company. Fidelis Energy will drill up to 12 wells at the North Franklin property.

Not only did Fidelis hit natural gas, they had discovered an enormous – and entirely new – natural gas reservoir.

“A Tucson company has found a new natural gas reservoir near Sacramento, with the first well capable of producing up to 12 million cubic feet per day.”

– San Francisco Chronicle, 6/23/04

“Fidelis Energy and its partners have discovered a new natural gas reservoir near Sacramento, California...”

– NBC TV, Sacramento, 6/23/04

“The discovery of a natural-gas well near Sacramento with enough output to supply the electricity needs of 125,000 homes daily was announced Wednesday.”

– Sacramento Business Journal, 6/23/04

Engineers estimated this first well to have an absolute open flow rate capable of producing over 12 million cubic feet of gas per day. That’s enough natural gas – when supplied to a power plant – to provide electricity to more than 125,000 homes on a daily basis.

Since that initial discovery, Fidelis has added additional acreages to the project totaling 1,800 acres under lease. And what’s more, they’re preparing a drill program for up to 12 more wells on the property.

Initial production rates from the first well at North Franklin could exceed 5,000 mcf per day. Once online and if engineers feel it is safe, they may increase flow rates between 5,000 – 7,000 mcf per day. At current market prices for natural gas, this would generate approximately \$12 million per year for each well drilled at the North Franklin property. And as you can see from the tearout at the top the potential is actually much, much greater.

With a newly constructed pipeline – and a gas purchaser in place – Fidelis is ready to generate substantial cash flow.

Remarkably, Fidelis is still one of the best-kept secrets Wall Street has yet to capture. As word begins to spread throughout the investment community that the company is already online as a commercial gas producer in California, investors are bound to realize that its shares are greatly undervalued.

In fact, it’s only a matter of time. But, amazingly, the North Franklin property is far from the only success story for Fidelis. In fact, one particular strategic partnership of Fidelis Energy’s could add millions to the bottom line each year. Introducing...

For more information on Fidelis Energy (symbol: OTC BB: FDEI), call toll-free 1-888-894-FDEI.

The Kern County Oil Connection

With skyrocketing oil prices, heavy oil extraction is booming in California. Never has heavy oil recovery been more profitable. At this very moment, Fidelis is aggressively pushing forward its other great asset: their *Comanche Point Heavy Oil Project*. Heavy Oil is just that: thick, heavy oil that is difficult to pump from the ground. Fidelis has formed a strategic partnership with a team of Californian engineers and geologists who are experts in heavy oil recovery, through the use of modern steam extraction and horizontal drilling technologies.

These specialists are modernizing Comanche Point oil fields by implementing these modern technologies to increase the oil's viscosity, making it easier to extract.

Recent third-party engineering studies of the leased area have **estimated total reserves at over 5 million barrels** of heavy crude oil.

"Report warns on soaring natural gas prices."

Financial Times - July 2004

"The company anticipates oil flows to increase to approximately 1,000 barrels per day."

Fidelis Energy owns an 80% share at Comanche Point.

With today's rising oil prices, Kern County heavy oil is now more economical and profitable than ever. As the program at Comanche gets underway, Fidelis will continue to pursue additional, yet similar opportunities: Low risk heavy oil fields and other oil and gas resources owned by individuals who, unlike large oil companies, don't have the time, energy, or resources to exploit them properly on their own.

Continued on Page 9

Let's take out our pencils
and do the math on
Fidelis Energy just one more time...

- ✓ 1,000 barrels a day x \$38 per barrel (for Kern County Crude) = \$38,000 per day
- ✓ \$38,000 per day x 365 days = \$13,870,000 per year
- ✓ \$13,870,000 x 80% ownership for Fidelis Energy = \$11,000,000 per year
- ✓ 0.196 per share x a P/E ratio of 20 = 3.93 per share for Comanche
- ✓ a total of \$20.35 per share for Fidelis Energy (FDEI OTC.BB)

ADVERTISEMENT

New steam recovery system, plus increased Oil prices, turns worthless oil fields into acres of **BLACK GOLD**

Fidelis Energy and its strategic partners' unique steam recovery system, are turning acres of oil fields once thought to have little value – because the heavy oil buried beneath the sands is too thick to pump efficiently – into high-volume producers.

The viscosity of oil is measured in degrees (not related to the degrees used to measure angles or temperatures). The lower the degree rating, the thicker the oil.

West Texas light crude oil, a common grade, is 38 degrees. By comparison, the heavy crude at Comanche is 12 to 18 degrees: thick, gooey, and very difficult to pump.

The Fidelis Energy team is employing advanced “steam-extraction” oil recovery technology in which the heat content of live steam warms the oil while it is still in the ground.

As the oil gets hotter, its viscosity lessens, making it easy to pump with conventional wells.

Here's how it works....

A mobile steam generator is hauled to the site. A series of horizontal pipes are placed across the acreage where the recovery is to take place.

The horizontal positioning of the pipes allows more of the heated pipe surface area to be in contact with oil-containing sandstone, increasing the speed and efficiency of heat transfer. The horizontal pipes are spaced approximately 150 feet apart.

The steam, superheated to 500 degrees Fahrenheit, is pumped through the pipes, heating the ground and the oil within it. As heat is transferred from the steam, it cools and condenses into water. The water is carried by the pipes back to the steam generator, where it is heated again to produce more steam.

The heat transferred from the steam makes the oil under the ground hotter and more fluid. With reduced viscosity, the hot oil can easily be pumped to the surface and profitably recovered.

Heat is transferred from steam to the oil to reduce its viscosity.

Conservative Numbers for Fidelis Energy's North Franklin Natural Gas Discovery

At a flow rate of 5000 mcf per day
X \$6.00 Natural Gas price
(approx avrg - prices hit \$8.00 in winter 2003)

= \$30,000 per day, per well

\$30,000 X 12 wells X 365 days/year

= \$46,000,000

\$46 M per year with
56 million shares outstanding

= 0.82 per share earning

P/E Ratio for Oil & Gas of 20 to 1

= \$16.42 share price
(based only on N. Franklin)

The \$20 energy stock you can buy - today! - for just a fraction of that price.

As I've pointed out, with the new natural gas reservoir at North Franklin, and success at Comanche Point, Fidelis Energy's share price is greatly undervalued, and has still remained undiscovered in the investment community. I strongly feel that *now (while the share price remains undervalued)* is the best time to get in on the bottom floor of this rapidly growing energy company.

"THE END OF CHEAP OIL."
National Geographic Cover - June 2004

With the projects combined, Fidelis could be well on its way to trading at \$20 per share.

This is one of the more extraordinary investment opportunities I've seen in my lifetime.

In addition, there are several factors that can increase potential valuation of Fidelis even further:

- ▶ Gas flows at North Franklin exceed 5,000 mcf per day.
- ▶ Energy prices continue to rise. (Last winter natural gas reached \$8)
- ▶ More wells are able to be brought online at the Comanche Point heavy oil project
- ▶ Oil flows at Comanche are greater than anticipated
- ▶ Oil prices continue to rise

Continued on Page 11

Five Great Reasons To Invest in Fidelis Energy

1 Fidelis is new, well managed, and greatly undervalued.

2 Fidelis just made a natural gas discovery at its North Franklin Project and will soon be online as a Commercial Gas Producer in California.

3 Fidelis chooses low risk, high potential projects **right here in America.** Projects like their Comanche Point that contains 5,000,000 barrels of reserves.

4 Fidelis uses the latest technologies with the expertise of their strategic partners; experts in heavy oil steam injection systems and interpreting 3D seismic readings.

5 Rising energy prices are here to stay and my rule is "Hedge against rising energy prices by investing in producing energy stocks."

How YOU Can Profit From This Extraordinary Trend...Today!

Clearly, the demand for oil and gas over the next 12 to 36 months will continue to grow...and grow rapidly.

"Some reports state that the world's oil and gas reserves are up to 80 percent less than predicted."
Report on Energy - Sept 2004

"Investment bank Morgan Stanley said it now believes surging crude oil prices could reach as high as \$61 a barrel."
CNN Money - September 2004

"Think oil is expensive now? Just wait. You've heard it before, but this time it's for real..."
National Geographic - June 2004

Given this undeniable fact, the next – and most important – step for you to take as a savvy investor is to identify the **best** way to take maximum advantage of this overwhelming market trend.

For more information on Fidelis Energy (FDEI: OTC.BB), call 1-888-894-FDEI (3334) or visit www.fidelisenergy.com.

IMPORTANT NOTICE AND DISCLAIMER: This featured company sponsored advertising issue of Superstock Investor does not purport to provide an analysis of any company's financial position and is not in any way to be construed as an offer or solicitation to buy or sell any security. Fidelis Energy Inc. (hereafter referred to as Fidelis), the company featured in this issue, appears as paid advertising, subsidized by Knights Bridge Holdings Ltd., by their description, a non-controlling shareholder, to provide public awareness of Fidelis. Fidelis management has approved and signed off as "approved for public dissemination" all statements made herein regarding Fidelis' history, technologies, current as well as prospective business operations and industry information. Capital Financial Media ("CFM") has received and managed a total production budget of \$880,000 for this print advertising effort and will retain any amounts over

North Franklin Site

It seems obvious that the best way to capitalize on this situation is to "cherry pick" select companies who are best positioned to grow. As I said before, the best opportunities are those companies who are *already producing...* and who are not yet known by the investment community.

Investing in blue chip energy stocks should make you respectable profits. But to pocket dramatic triple-digit gains, you must seek out small cap stocks already drilling in areas where significant discoveries can be made.

I believe Fidelis Energy will offer early shareholders a unique opportunity over the next twelve months as they make their move from an exploration company to that of a producer. The geological team has a proven track record and the company is well funded.

In this business, finding that rare combination of the right people – and the right developments – and having it come together at just the right time can be a once-in-a-lifetime opportunity. And that's exactly what is happening right now with Fidelis.

and above the cost of production as a fee for production services. Superstock Investor also expects to receive new subscriber revenue as a result of this advertising effort. Readers should understand that thinly traded microcap companies like Fidelis, can have their share prices adversely affected by the sale of these shares. *More information can be received from Fidelis' investor relations firm at 1-888-894-FDEI or at Fidelis' website www.fidelisenergy.com. Further, specific financial information, filings and disclosures as well as general investor information about publicly traded companies like Fidelis, advice to investors and other investor resources are available at the Securities and Exchange Commission website www.sec.gov and www.nasdaq.com. Any investment should be made only after consulting with a qualified investment advisor and after reviewing the publicly available financial statements of the company and verifying that the investment is approved within his/her state. Investing in securities is highly speculative and carries a great deal of risk. Past performance does not guarantee future results. The information contained herein contains forward-looking information within the meaning of Section 27A of the Securities Act of 1933 and Section 21E of the Securities Exchange Act of 1934, including statements regarding expected growth of the featured company. Each monthly issue is packed with triple-digit profit potential that you'll find nowhere else. Just look at our recent winners above...

The truth is, you just can't find these types of opportunities unless you go digging to uncover them. That's our specialty, and that's why I want to tell you about Fidelis Energy Inc. (FDEI:OTCBB) - along with a word to the wise...

"Hot" Stocks Are NEVER Accidental!

Junior resource stocks that strongly out-perform the market do so for very specific reasons. IT'S ALMOST NEVER ACCIDENTAL. Here's what to look for with these small/micro-cap stocks...

If they're trading around a couple of dollars, let's say, they'll have more leverage to significantly increase their price than if they were trading for \$10 or more. (Fidelis now trades under \$2, and has plenty of room to grow.)

Resource companies must have already located the natural gas or oil that they are looking for. Exploration companies that are still in the exploration stage are too risky. (Fidelis has already discovered a natural gas reservoir near Sacramento and proven oil reserves near Bakersfield, California.)

Resource companies must be located in areas where further expansion is possible, energy demand is high and/or transportation of the energy is made easy. (Fidelis' properties are located in energy-starved California - there couldn't be a better market. California's pipelines provide an easy mode of transportation for Fidelis' natural gas.)

"Hot" stocks are almost ALWAYS actively marketed to investors - and everyone benefits because shares are like products: THEY MUST BE SOLD.

As you'll see from our report, Fidelis has a great story to tell and *they'll be very aggressive in making sure it gets wide distribution.* (After all, what good is an up-and-coming investment if hardly anyone hears about it?!!) *SuperStock Investor* puts any new promotional company through this four-part "test" – it MUST score four-out-of-four before we'll even consider it. And Fidelis? We'd urge you to take a few minutes to read this fascinating story, because if ever there were an A+ story to tell, this would surely be it! Fidelis is now trading under \$2, and we would strongly recommend that you further investigate the company's prospects with your broker or investment advisor.

Get Two Valuable Financial Resources FREE

When you subscribe to *SuperStock Investor*, I will also send you two of the most valuable books I've ever come across. I want all of my new subscribers to read them, which is why I'm sending them to you FREE.

The first is *Retiring Rich*, by Dr. Michael Alexander. He has spent years studying historical stock market data, and identifying the cyclical patterns that drive the markets. His timing, for example, was right on target in 2000 when he was one of the few experts to warn of the coming crash.

In *Retiring Rich*, Dr. Alexander shows you how to achieve long-term gains by adjusting your asset mix to suit the current cycle, and invest successfully in a down market. (Reg. \$79)

Continued from Page 4

Shrinking supply + booming demand. You don't have to be Einstein to work out the solution to this equation: rising oil prices ... which bodes well for early investors in Fidelis Energy.

Today crude oil has eclipsed the \$50 per barrel mark – more than 5 times the 1998 price of \$10 per barrel...and presently there is no end in sight.

Natural gas prices heading north?

The situation in natural gas is similarly bullish. Total U.S. gas demand is expected to rise by 50% over the next decade, largely driven by utility consumption for power generation: 95% of the new power plants being built today are fueled by natural gas.

Despite the erection of new gas drilling rigs, new exploration isn't compensating for reduced levels of output from existing resources.

By 2010, 50% of the total power consumed in the U.S. will be produced by burning natural gas. Natural gas prices are now almost 3 times as much as their average price for the past decade.

Extreme cold in the winter and heat in the summer requires us to burn more natural gas, for heat and to provide air conditioning, respectively. According to weather experts, we have just entered the early stages of a 20-year cold cycle, which means colder winters. Peak energy prices this summer could be 50% higher than last summer.

You'll also get "The New Bull Market in Gold: \$1,000 Gold and the Many Ways to Profit From It" by James DiGeorgia and Tom McClellan. (Reg. \$39)

In "The New Bull Market in Gold: \$1,000 Gold and the Many Ways to Profit From It" co-authored with Tom McClellan, James shares with you 34 years of accumulated wisdom about buying gold and gold coins – wisdom that has made him a multi-millionaire many times over!

A one year trial subscription costs just \$69 – which includes the gifts valued at \$118. Just fill in the order page and either fax or mail it today.

This is a fast-moving world – with many dangers, yes, but also HUGE opportunities – and Fidelis Energy is well worth your further investigation.
